

Cleanup

STEDIA
ステディア

Made in Japan

Creating cheerful smiles from the kitchen

It always starts from Cleanup.

We are aiming to become a pioneer for society.
We will create scenes in life beyond the product.

We will make “The first time” in the kitchen
“The beginning” of every families’ smile.

A kitchen that keeps shining in your life.

STEDIA

3 items

Focusing and observing on the changing eras and life closely. Ceaseless passion has been brought when developing kitchens. All those experiences has been culminated to “STEDIA”. The 3 items will shine in your life.

- 01 Stainless Steel Eco Cabinet
- 02 e-Coat + Special embossed finish
- 03 Tool Pocket + Slide Box

01 Stainless Steel Eco Cabinet

Because it is a place that is usually hard to take care of. Stainless steel structure that resists mold and smell from humidity.

Your kitchen will be protected from mold, smell, and dirt.

Most manufacturers' kitchen cabinets are made out of wood.

On the other hand, stainless steel cabinets are equipped for STEDIA as a standard.

Stainless steel is a material that resists mold and smell.

A kitchen is something that is used everyday.

In order to maintain cleanliness, stainless steel is applied all the way towards the inside where it is usually hard to take care of.

Which is better against mold? "Stainless steel VS Wooden"

Material test was conducted comparing stainless steel used on our cabinets and wooden board. The testing was based on Japan Industry Standard Z 2911 mold resistance method. Growth rate of mold was compared by applying mold spore suspension on each material. After 4 weeks, mold does breed on both materials. However, looking through a microscope, the growth has stopped within the surface on stainless steel [Photo 1] where it has grown towards the inside of the material for wooden boards [Photo 2]. In addition, mold grows much faster on wood. After wiping off the mold from both materials using alcohol, they were left out on a hot and humid environment for a month. Mold was not found again on the surface of stainless steel, but it was on every wooden test subjects [Photo 3].

[Photo 1] Test result / Microscopic image
Mold spore (black dots) is germinated but is limited on the surface. It is not grown towards the inside.
(Based on our test conducted on June, 2019)

[Photo 2] Test result / Microscopic image
Mold has been spread out and germinated mold spore has penetrated towards the inside.
(Based on our test conducted on June, 2019)

[Photo 3] Test Result
Although germinated mold was wiped off, mold regrew on wood (Left).

※ Test was conducted in a highly humid and nutritious environment to accelerate growth of mold.

02 e-Coat + Special embossed finish

The countertop and sink will be protected from scratches and dirt with our original stainless steel processing technology.

The e-Coat processing raises oil stains. (Special hydrophilic ceramic coating)

Tough oil stains can be removed easily by using a wet cloth or towel. By applying a special coating process that adapts well with water, dirt is raised from the stainless steel surface with water penetrating under the dirt.

Comparison of oil being wiped with wet cloth

* 10 years worth durability is confirmed based on our company's testing standard for e-Coat (Special hydrophilic ceramic coating).

Scratch-resistant special embossed finish

The work surface that you use mostly has a special embossed processing applied which reduces contact with dishes or utensils. Scratches are less likely to form and become less noticeable when they do.

03 Tool Pocket + Slide Box

Drawers will become steric, by placing frequently used items towards the front.

Taking out and returning items is now more efficient.

All frequently used items can be stored in the front.

More frequently used items can be stored in the Slide Box.

Sink Cabinet

All frequently used tools used around the sink can be organized and stored in the sink cabinet.

1 Tool Pocket

2 Slide Box

3 Drawer

Stove Cabinet

Pots, pans and also bottles can be stored under the stove which will make cooking more efficient.

COUNTERTOP & SINK

Stream Flow Sink

With the water force during the vegetable washing while cooking or dish washing after meal, garbage in the sink swiftly flows into the drainage.

Help keep your sink clean

Water used during cooking will capture garbage and stains and flow towards the stream flow. Garbage flowing into the stream flow will be pushed away with water and into the drainage.

"Systemized Kitchen" We will keep improving.

An ideal kitchen where color, size, functions, layout can be chosen freely.
 To be able to provide your dream kitchen which was only available by custom order.
 The dream came true in Japan when Cleanup released its first "Systemized Kitchen" in 1973.
 A products that was born without any concepts.
 The name "Systemized Kitchen" which was named by Cleanup was accepted by countless customers and it has become a common noun.
 An ideal kitchen must use an ideal material. 2 years after the "Systemized Kitchen" was born, the first ever stainless steel kitchen with stainless steel inner structure was released.
 As a matter of fact, wooden cabinet is still generally used for systemized kitchens.
 To make the structure stainless steel requires certain skills and cost.
 Without high level stainless steel technology, systemized kitchen with stainless steel cabinets will not be implemented.
 In 2011, stainless steel cabinet became a standard for middle-high range systemized kitchens.
 A product using the ideal material towards every corner was born.
 With the clean and durable kitchen, history of kitchen was changed.
 And now, "STEDIA" will take Japan's systemized kitchen to another level.

- 1973 ○ The first Systemized Kitchen in Japan developed.
- 1975 ○ Stainless steel sink stand released.(First ever in the industry)
- 1983 ○ Simply installable Systemized Kitchen released.(First ever in the industry)
- 1998 ○ All slide storage system released.(First ever in the industry)
- 1999 ○ Foot level storage Floor Container released.(First ever in the industry)
- 2004 ○ The first stainless steel sink integrally molded with drainage released.
- 2005 ○ Super Silent e-Sink released.(First ever in the industry)
- 2007 ○ Self Cleaning Cooker Hood released.(First ever in the industry)
- 2011 ○ Stainless steel cabinet standardized for middle-high range systemized kitchens
- 2015 ○ Stream Flow Sink released
- 2018 ○ **STEDIA Debut**

Stainless steel cabinet's strength and beauty was proven by a kitchen which was used more than 30 years.

Sakura DX

In 1975, Cleanup released the very first stainless steel cabinet kitchen in the industry "Sakura DX". The kitchen in the pictures is an actual kitchen used in a general home for more than 30 years. After examining, there was no mold or rust. And based on analysis of the frame structure, it was not a problem at all to keep using the kitchen.

Every part remained clean including the rear and inside of the cabinet.
 The shine of stainless steel was maintained for more than 30 years.

STEDIA is the fruit of skills that Cleanup has been improving.

STEDIA will keep shining because it is using stainless steel with outstanding durability. To be able to process stainless steel with high durability is extremely complicated. Cleanup's factories are evolving by machinery upgrades and enhancing IT technologies. However, the finishing process of sinks and countertops are conducted by our skilled well experienced engineers called "Meisters".
